

## CLOUD SERVICES

### Don't Let Cloud Complexity Drain Your Budget

When cloud promises cost savings but delivers billing shocks and security gaps, you need expert management that turns cloud chaos into competitive advantage.

#### What happens when:

- Your monthly cloud bill arrives with unexpected charges that blow your IT budget?
- A security audit reveals your Microsoft 365 tenant uses default settings that expose business data?
- You discover you're paying for hundreds of software licenses that nobody actually uses?
- Remote workers can't access critical applications because cloud services weren't configured for business workflows?

### Standard Cloud Setups Leave You Exposed and Overpaying

While basic cloud migrations promise savings and efficiency, you often get the opposite:

#### Billing shock syndrome

Usage-based pricing with no monitoring leads to surprise costs and budget overruns.

#### Default configuration disasters

Standard setups ignore critical security settings and business-specific requirements.

#### License waste epidemic

Paying for software licenses that users don't need, don't use, or can't access properly.

#### Integration nightmares

Cloud services that don't work together, creating productivity barriers instead of business enablement.

#### The reality:

Cloud services without expert management mean **higher costs, security risks, and frustrated users.**

# Our Managed Cloud Services: Smart Cloud That Works

## Predictable Cost Control

**Fixed-fee private cloud with monitored public usage.** Our hybrid architecture places workloads where they deliver best value, while continuous monitoring prevents billing surprises and identifies cost optimisation opportunities.

## Business-Optimised Configuration

**Cloud services configured for your actual workflows.** Beyond basic setup, we optimise Microsoft 365 for your business processes, configure security policies that protect without frustrating users, and ensure integration actually works.

## Smart License Management

**Right-sized licensing that matches real usage.** Regular license audits eliminate waste, ensure compliance, and optimize your software investments based on actual user needs and business requirements.

## Security Built In, Not Bolted On

**Enterprise-grade protection configured from day one.** Identity management, device policies, and access controls that maintain security standards while enabling productivity across all locations and devices.

## Architecture That Scales Smartly

**Hybrid cloud design that grows with your business.** Private cloud stability for core systems, public cloud flexibility for new projects, and intelligent workload placement that optimises both performance and costs.

## Real Client Success Story

*“Si Futures re-architected our cloud environment using hybrid architecture and centralised identity management. We achieved a 30% cost reduction, doubled file access speeds for our international teams, and gained centralised policy control across all our systems.”*

- IT Director, Financial Services Firm

## Take Action Now

Cloud Waste Adds Up Fast

Get **Your FREE** Cloud Cost & Security Assessment

### We'll reveal:

- ✓ Exactly how much you're overspending on unused licenses and oversized resources.
- ✓ Where your current cloud setup creates security vulnerabilities and compliance gaps.
- ✓ Cost optimisation opportunities through proper architecture and license management.
- ✓ ROI projections for hybrid cloud approach based on your actual usage patterns.

## Optimise Your Cloud Today

Don't let cloud complexity become a budget drain.

Your business needs cloud services that enhance productivity - not create new problems.
